

BURGLE BROS

The Casino Capers

2

Introduction

The Burgle Bros are back at it. Never one to turn down a challenging heist, they have decided to take down a string of casinos. But this is no office job—tougher safes, tightened security, and, perhaps worst of all, you'll be working during the day!

Components

2 Neoprene Playmats	27 Gear Cards	6 Crack Tokens
16 Wooden Walls	8 Pool Event Cards	2 Entrance Tokens
32 Room Tiles	8 Lounge Event Cards	15 SWAT Tokens
17 Chips	9 Character Cards	4 Fingerprint Tokens
5 Safe Dice	32 Patrol Cards	4 Steak Tokens
2 Casino Dice	6 Distracted Cards	4 Crow Tokens
20 Heat Cubes	8 Dead Drop Cards	3 Crowd Tokens
22 Counting Cubes	9 Character Figures	1 Monorail Token
2 Destination Markers	2 Bouncer Figures	1 Escalator Token
1 Heist Log Sheet	1 Car Figure	1 Out-of-Order Token
1 What's New Sheet	1 Football Figure	1 Disguise Token
1 Rewards Envelope	1 Tiger Figure	1 Finale Loot Stickers
1 Finales Envelope	1 Gravity Boots Figure	

Playmat Setup

To build the table, open the box, insert the legs in the corners, and flip it over. Make sure to tilt the legs outward. Then place one playmat on the table and one underneath.

INSERT LEGS IN CORNERS

Before Your Heist (Campaign Mode)

Because one job is never enough.

Burgle Bros 2: Casino Capers is designed to be played as a series of nine heists, each with a unique finale and reward!

You do **not** need the same players or even the same number of players as you move from heist to heist.

You will find two envelopes in the box.

- The **large envelope** contains nine finale cards. During each heist of the campaign, you will use the top card from this envelope. Each finale is numbered—start at 1 and work your way to 9 as you play through the campaign.
- The **small envelope** is full of rewards that you will gain at the end of each heist.

You will also find the Heist Log, which tracks your progress through the campaign. An important part of this is the **Suspicion Meter**, which

will prompt you to add distracted cards to the patrol decks or remove patrol cards from them, depending on your current Suspicion.

For your first heist, you start at 6 Suspicion.

Playing with a Random Finale

If you've played through all nine heists—or you just want to skip the campaign—you can play **Random Finale Mode** instead.

In this mode, ignore the rulebook sections marked “Campaign Mode.” Otherwise, this mode follows all of the normal rules of play.

When setting up, you'll place all 9 finale cards nearby. Feel free to take out any finales you've already won and have Finale Loot for (page 13).

When you crack the Safe, you'll shuffle the finale cards and draw one of them at random. Use that finale to finish your heist.

If you want to adjust the difficulty of Random Finale Mode, you may set the **Suspicion Meter** to any level you wish and set up your game accordingly. The normal difficulty is 6 Suspicion.

Heist Setup

1. Find the **Owner's Office and Safe tiles**, as well as both **Monorail and Escalator tiles** (6 tiles total) and set them aside. Take the remaining 26 tiles and shuffle them facedown.
2. Take the **Owner's Office, one Monorail, and one Escalator tile** and add 13 random facedown tiles. Shuffle those 16 tiles facedown and then arrange them in a 4×4 grid on the first floor. Repeat this step for the second floor with the **Safe, one Monorail, and one Escalator tile**, adding the remaining 13 random tiles.
3. Place 8 **walls** on the first floor and 8 walls on the second floor. You can place each wall between any two tiles, but you cannot close off a tile completely. (*Spreading walls out works best.*)
4. Shuffle the 17 **chips** into a facedown pile. Remove 1 random chip and return it to the box facedown. **In a two-player game**, remove a Saleswoman chip instead of a random one.
5. In Campaign Mode, add **distracted cards** or remove **patrol cards** from the patrol decks as prompted by the Suspicion Meter. Then, regardless of play mode, shuffle the **patrol decks** for the first and second floors separately, and place them facedown nearby.
6. Draw 1 **patrol card** from the first-floor patrol deck. On that floor, place 8 chips facedown as it indicates with dots. Also place a **bouncer figure** on the tile marked with a letter and number. Then place that card face up next to its patrol deck in a discard pile.
7. Repeat step 6 for the second floor, using a second-floor patrol card. Keep the discard piles for the two patrol decks separate.
8. Draw 1 more **patrol card** from each deck, and place a **destination marker** on each floor on the tile indicated with a letter and number. (This is the **DESTINATION** of the bouncer.) Discard that card.
9. Each player chooses a member of the Burgle Bros and takes their **figure, character card, and gear cards**. They place their gear cards face up under their character card, so only the gear titles are visible.
10. Shuffle the **Pool event deck** and the **Lounge event deck** separately and place them facedown nearby.
11. Keep all **dice, heat cubes, counting cubes, and tokens** nearby.
12. In Campaign Mode, take the **finale card** for this heist out of its envelope, but do not flip it over to read its rules! If you're playing Random Finale Mode instead, place all the finale cards nearby.

How to Play, Win...and Lose

Time to plan the job.

Burgle Bros 2: Casino Capers is a cooperative game where you and your friends will try to infiltrate a casino in broad daylight, crack the safe, and get out, all without getting caught by the casino's bouncers.

This game is played over a series of turns. Every time a player takes a turn, the bouncer on the same floor of the casino takes one too.

Once that player and the bouncer are done, the next player in clockwise order starts their turn—and so on. Keep playing like this until you win or lose as a team!

You win if you **crack the safe and complete the finale** (pages 12–13).

You lose if **any player reaches 6 heat**, which you generally get from the bouncers and some of the nastier rooms of the casino.

To learn how to play, just keep reading—you'll first need to get inside by **Entering the Casino** (below), then play out your turn as described in **Player's Turn** (page 7), and then get the bouncer going as described in **Bouncer's Turn** (page 8).

Entering the Casino

First, we need to break in.

Before the first player takes their turn, the players must choose 2 corner tiles of the casino on the first floor as their **entrances**. Place an entrance token on those tiles.

After this, figure out which player will take their first turn. **The first player is whoever gambled last—or choose randomly!**

When each player starts their first turn, they must move into one of the 2 entrance tiles. Then, they'll **reveal** the tile (*flip it face up permanently*) if it is not revealed.

This tile might make you do something.

If it says **WHEN YOU ENTER**, do what it says.

This very first move doesn't cost an action.

They will then have 4 actions to take on their turn—which you will learn about...now.

Player's Turn

Let's get down to business.

On your turn, you can take up to **4 actions**. You can take fewer than 4 actions, you can take the same action multiple times, and you can take them in any order. Here are the actions you can take:

- **Move** to an adjacent tile (*not through a wall*). If there is a facedown chip, reveal it first and resolve it. Then, reveal the tile if you're still on it. (*Reveal means to flip something face up permanently.*) Finally, if the tile has a **WHEN YOU ENTER** effect, resolve it.
- **Peek** at an adjacent tile (*not through a wall*). Reveal the chip there, then reveal the tile.
- **Use** the **WHILE HERE** action on your current tile, if it has one.
- **Prep** a gear card. **Once per turn**, you may take a gear card from behind your character card and place it face up in front of you. It's now **PREPPED** to use.

WHEN YOU ENTER

WHILE HERE

If you enter a tile with a bouncer or if one enters your tile, you gain 2 heat. (Mark this by taking heat cubes. If anyone has 6 heat or more, you all lose!)

If you enter or reveal a tile with a chip, all kinds of wacky things can happen. To learn what it does, read page 14!

Moving, Jumping, and Adjacency

When a figure **MOVES**, place that figure onto an adjacent tile. A tile is **ADJACENT** to each tile touching its edge, but not diagonally! Also, if there is a wall between 2 tiles, those tiles are not adjacent.

Some things in this game will tell you (*or a bouncer*) to **JUMP** to a specific tile. Just pick up the figure and put it on that tile, ignoring any walls and tiles in between! However, you still resolve any chips there, reveal the tile if it's facedown, and resolve any **WHEN YOU ENTER** effects, unless you're told otherwise.

If the bouncer enters a tile with any players, each player there gains 2 heat. The bouncer does not stop there unless he's out of movement.

After the bouncer finishes moving, his turn ends, and the next clockwise player begins their turn.

At some Suspicion levels you will find **distracted cards** in the patrol deck (page 3). If you draw a distracted card, choose any tile on your floor with an even number in the bottom-left corner as the bouncer's destination. If there are no tiles with even numbers, draw another card.

Hunting

If a bouncer ever needs a new destination but the patrol deck for his floor is empty, remove the destination marker for that bouncer off the playmat for that floor. That bouncer is now **HUNTING**.

He will now use his movement to move toward the nearest player.

(If multiple players are equally close, the players choose between them.)

The bouncer still moves 3 spaces per turn, unless he reaches a player.

If a hunting bouncer enters a tile with any players, each player there gains 2 heat, as normal, but the bouncer stops moving.

If a hunting bouncer starts his turn in a tile with a player, each player there gains 2 heat, and the bouncer does not move.

A hunting bouncer's destination marker can be returned to the playmat by commotions, gear, or event cards. If you **set a new destination** in this way, place the destination marker on the prompted tile, and the bouncer will stop hunting until he reaches that destination.

Cards that make you **change or swap a destination** have no effect if there is no destination marker on the playmat for that floor.

In this example, the bouncer reaches his destination, but the patrol deck for his floor is empty. Because of this, he starts hunting.

The nearest player is 2 spaces below him, so he moves his remaining 2 spaces toward the player, who gains 2 heat!

Commotions

What's going on? Did a scorpion get into the potato salad again?

Some things, such as tiles and chips, will make a **COMMOTION**.

When something makes a commotion, set the destination marker on that floor to the tile where the commotion happened. The bouncer **immediately moves 1 space** toward that tile. This doesn't count as one of the bouncer's 3 moves on his upcoming turn, and this may result in players gaining heat.

If the commotion is on a tile with a bouncer, ignore the commotion. The bouncer doesn't change destination or move.

When a bouncer reaches the commotion, he sets a new destination. Draw a new patrol card. If there are no patrol cards, he starts **HUNTING**. He keeps moving if he still has movement left.

Bouncers only care about the newest commotion. Once they reach a destination, they won't remember past commotions.

Gear

Locked, stocked, and smoking hot.

Each player starts with a few gear cards behind their character card.

Once per turn, you can use the Prep action to make one of your gear cards **PREPPED**—pull out the gear card from behind your character card, and place it in front of you. (*You can have multiple gear cards prepped at once.*)

You can use prepped gear at any time. It doesn't matter whether it's the holder's turn, another player's turn, or a bouncer's turn. You can even use it immediately after new information is revealed that changes your plans, such as flipping up a patrol card to see a bouncer's new destination. When in doubt, interpret when you can use gear in a way that is friendliest to the players.

If gear is used during a bouncer's turn, the "current player" is the player who just took a turn.

A gear card shows how many uses it has before it is flipped over. Each time you use a gear card, add a counting cube to it. You don't need to prep the gear in order to use it again!

This gear card, Bingo, can be used twice before it is flipped to its backside.

After a gear card is flipped, its back shows a new ability that can only be used during the holder's turn by spending an action. Once this ability is used, remove the gear card from the game.

Alternate Gear

As you play through the campaign, you will unlock alternate gear cards for specific characters, which get added to the rest of their gear behind their character card during setup.

This gear, Crybaby, is an alternate for Bingo.

In play, you can prep **either** a standard gear card or its alternate. If you prep the standard gear, remove its alternate from the game. If you prep the alternate, remove its standard gear from the game.

Cracking the Safe

We've found the safe. Now, just need to crack it.

After the Safe is revealed, you can begin moving safe dice to it. (Safe dice come from Mole chips, described on page 14.)

While you are on the Owner's Office, you can spend 1 action to move a safe die from the Owner's Office to the Safe.

In this example, the player spends 2 actions to move 2 dice from the Owner's Office to the Safe.

While you are on the Safe, you can spend 1 action to roll all the dice that are on the Safe. If a die roll matches a number on any tiles in the same **row** or **column** as the Safe, cover **all of those numbers** with a crack token. (Crack tokens stay forever. Cracked tiles still have numbers.)

In this example, a “2” and “4” were rolled. This cracks the “2” Crow’s Nest, as well as both the “4” Slots and “4” Escalator.

Even after these numbers are covered, they can still be referenced by gear and other cards.

After rolling, return 1 die from the Safe to the Owner's Office. If you have actions left, and if there is still at least 1 die on the Safe, you can spend 1 action to roll again.

Once you reveal all the tiles in the same row and column as the Safe and **cover the numbers on those tiles**, you've cracked the Safe. Time to complete the finale! Read on through the next page.

Completing the Finale

Let's finish the job and get out of Dodge.

BODYGUARD HEIST ONE

We know that two celebrities are in grave danger. In the safe we'll discover who they are, but then we have to find them and guide them out of the casino. Oh, and we'll need to keep them hidden from the bouncers. There better be a reward for this...

random discarded patrol cards and put them at the bottom of either patrol deck.
Setup: If you are using this game, then shuffle them face-down. Take a random discarded patrol card for each player and place chips face-down as the card shows. If a chip would be placed on a tile with a player on it, choose another tile with no player or chip.
• In a two-player game, choose 6 chips to discard after placing them.
• In a three-player game, choose 3 chips to discard after placing them.
If a Prima Donna is discarded in the step above, put it back on the tile facedown instead.
Rules
• Chips still activate normally. Players may peek at an adjacent chip even if its tile is revealed.
• When a player enters a tile with a Prima Donna chip, they take it and put it on their character card.
Win: Once 2 Prima Donna chips are on character cards, players can exit through any tile with an entrance token. Once all the players have exited the casino, they win!
Loss: If a player with a Prima Donna chip is ever on a bouncer, the players lose.

If you're playing Campaign Mode, flip over your finale card.

If you're playing Random Finale Mode, shuffle the deck of finale cards, and draw one at random.

The finale card will describe any necessary setup and special rules.

Many finales will require your players to **EXIT** through a specific tile or tiles. If you end your turn on one of those tiles while meeting any other requirements to exit listed on the finale, you automatically exit. (*No action or move required!*)

After a player exits, the bouncer on their floor skips his turn. Bouncers only take turns after players inside the casino. After players exit they no longer take turns, but they **can** use their prepped gear.

If you complete the finale, your heist succeeds and you win!
Some finales have extra ways to lose in addition to losing from gaining too much heat.

After Your Heist (Campaign Mode)

You're already thinking about that next caper.

When the game ends, fill out the Heist Log! Write down the names of the players, whether you won or lost, and your new Suspicion.

If your heist succeeded, add 1 Suspicion. If your heist failed, subtract 1. Suspicion cannot go lower than 1 or greater than 10.

Take your loot! If your heist succeeded, find the Finale Loot sticker sheet. Take the sticker matching the finale you just won, and stick it on the Trophy Case located under the trays in the center of the box.

New ability unlocked! Win or lose, take the top card from the smaller envelope. This is an alternate gear card that gives a character even more options in future heists (page 11).

Whether you won or lost, play the next heist in your next game.

Chips Glossary

CHIPS have different effects when they are revealed.

RED CHIPS activate if you enter their tile but are discarded if you peek into their tile.

Drunk: *Watch it!* Do not reveal the tile under this chip. **If you're on the first floor, you slide**—jump to the next tile in the same direction you were moving (*even through walls*). If there are no tiles in that direction because you are on an edge, ignore this paragraph.

If you're on the second floor, you fall—jump down to the first-floor tile in the same row and column.

After resolving the effect, discard this chip. If needed, reveal the tile and chip of the room you jumped into.

Saleswoman: *Stop...talking.* While on this tile, you cannot use the **MOVE** action. When another player enters this tile, or if you are moved by an event or gear, discard this chip—you're no longer stuck!

YELLOW CHIPS activate if you peek into their tile, but are discarded if you move into their tile.

Prima Donna: *What's she need now?* Jump to the tile with this chip. Discard this chip.

Undercover: *Caught out.* The bouncer on this floor jumps to this tile. Discard this chip.

BLUE CHIPS are only discarded once they are used.

Crowd: *Nice cover.* When a bouncer enters the tile with this chip and any number of players, the players there do not gain heat. Discard this chip once it prevents at least 1 player from gaining heat.

Mole: *They're inside.* While on the tile with this chip, a player can spend **2 actions** to discard this chip and place a safe die on the Owner's Office. If the Owner's Office is not yet revealed, place the die on this tile instead, and move it to the Owner's Office once it's revealed.

Tile Clarifications

Buffet

Each time a player enters this tile, add a counting cube. When the Buffet has 3 counting cubes, remove them all and make a commotion on that tile. The bouncer immediately moves 3 spaces toward it, instead of the 1 space for a normal commotion.

If the bouncer reaches the Buffet in less than 3 spaces, he stops moving (*until his turn*).

Cashier Cages

Each time a player enters this tile, add a counting cube unless the tile already has 5 counting cubes.

When you try to **MOVE** out of this tile, roll a die. If you roll lower than the number of cubes on the tile, you stay on the tile, still spending the action. Otherwise, move out.

Gear and chips can move you out without needing to roll.

Count Room

You cannot use the Peek action while on this tile.

If you end your turn on this tile, make a commotion on this tile.

Crow's Nest

When the bouncer enters, each player on an adjacent tile, even through a wall, gains 1 heat.

Do not gain heat if you enter a tile adjacent to a Crow's Nest that has a bouncer on it already.

Lounge and Pool

Draw an event card from the corresponding deck; you must perform the actions on the card if possible.

The event effects happen before you can take another action (or end your turn), but any player can use prepped gear before the event effects happen.

If the corresponding deck is empty, shuffle the discarded cards and then draw a card.

Owner's Office

When this tile is revealed, immediately place any safe dice on other tiles onto this tile instead.

While you're on this tile, you can spend 1 action to move a safe die from here to the Safe. You can move multiple dice to the Safe during a single turn, but you'll need to spend an action for each die.

Revolving Door

While on this tile, you can spend 2 actions to jump to a diagonal tile touching the corner of this tile, ignoring walls.

You can still move out of this tile normally with the **MOVE** action.

Slots

When you enter this tile, you make a commotion here unless another player on the same floor is on a tile in the same row or column as this tile.

Surveillance

When the bouncer enters this tile for any reason, a counting cube is added to the tile.

As soon as 4 cubes are placed on this tile, all players on the same floor as this tile gain 2 heat. Then remove the cubes.

While on this tile, a player can remove all counting cubes on the tile by spending 1 action.

Table Games

When you enter this tile, roll 2 casino dice. If the sum of the 2 numbers you rolled is either 7 or 11, you lose 1 heat.

If you roll any other sum besides a 7 or 11, make a commotion on this tile.

Variant: Dead Drops

If you're looking for a challenge, you can play with Dead Drops. These drops represent gear that has been stashed in the casino for you to pick up.

During setup, players do not get gear cards. Instead, shuffle **all** gear cards into a facedown pile. Give each player a random Dead Drops card. Each card has 3 tasks you are watching for. If **any** player completes one of the tasks on your card, **you** can immediately draw 2 gear cards and choose 1 to keep. Prep that gear immediately without spending an action. Return the other card to the box. Each task can only be completed once.
