

# SLEUTH

SOLVE THE MYSTERY  
OF THE MISSING GEMS

**A SID SACKSON GAME**

**EAGLE-GRYPHON  
GAMES**

# SLEUTH

A SID SACKSON GAME

3-7  
PLAYERS

10+  
AGES

30+  
MINS.

## Object of the Game

*Sleuth* is a fascinating detective game for 3 to 7 players. Through skillful questioning of their opponents, each player gathers evidence and then, using their powers of deduction and logic, attempts to discover the identity of the missing gem!

## Components

36 Gem Cards

54 Search Cards

1 Pad of Information Sheets

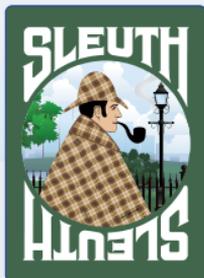

## Cards

*Sleuth* is played with two special decks of cards:

### GEM DECK

The **Gem Deck** consists of 36 cards, each featuring a different combination of three elements: gem (diamond, pearl or opal), type (solitaire, pair or cluster) and color (red, blue, green or yellow).

Gem Card Back

Blue Diamond  
Solitaire

Red Opal Pair

Green Pearl  
Cluster

## SEARCH DECK

The **Search Deck** consists of 54 cards that are used for gathering evidence from other players. There are three primary types: 1) One Element Cards which feature a gem, a type or a color, 2) Two Element Cards which feature a combination of any two elements, and 3) Free Choice Cards (see *Play*).

Search Card Back

One Element Card  
Blue Cards

Two Element Card  
Diamond Clusters

Free Choice Card  
Free Choice Yellows

## Setup

Each player receives an **Information Sheet** and uses it to keep track of evidence gathered during the game. Players should keep their **Information Sheet** secret from their opponents.

Shuffle the **Gem Deck** and remove one card, placing it where no player may accidentally see it. This becomes the **Missing Gem**. The following number of Gem Cards are then dealt *face down* to each player:

3 players — 11 cards

4 players — 8 cards

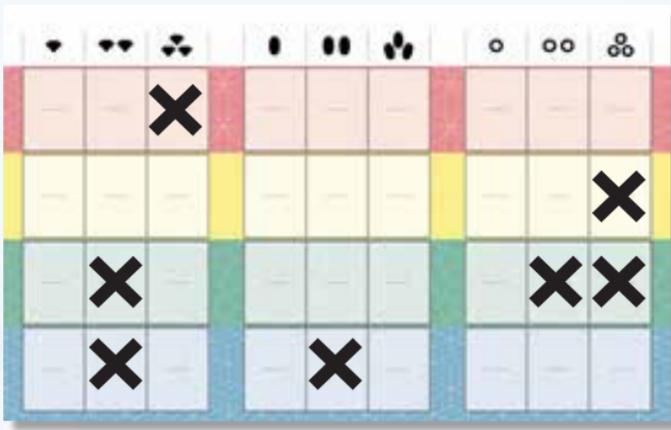

5 players — 7 cards

6 players — 5 cards

7 players — 5 cards

Remaining Gem Cards (if any) are placed *face up* in the center of the table. On their Information Sheets, **all players** record the identity of cards in the center of the table. After picking up their hand, each player then *secretly* records the identity of their own cards.

**Example:** In a five-player game, Player A was dealt the following cards: **Red Diamond Cluster, Blue Diamond Pair, Green Diamond Pair, Green Pearl Pair, Green Pearl Cluster, Blue Opal Pair, and Yellow Pearl Cluster.** They recorded the identity of these cards on their Information Sheet as shown on the next page.

The Search Deck is shuffled and four cards are dealt *faceup* to each player (as illustrated on back cover of game box). The remaining cards are placed *facedown* in the center of the table to form the **Drawing Deck**.

Choose a random player to take the first turn, and play rotates clockwise from then on.

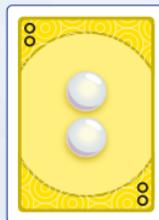

## Play

During the game, players obtain clues to the identity of the missing gem by interrogating other players. During each turn, a player may interrogate one opponent. To do so, the player places one of his Search Cards *faceup* in the center of the table. He may use either a **One Element Card**, a **Two Element Card** or a **Free Choice Card** as follows:

### ONE ELEMENT CARDS

When using a **One Element Card**, a player may interrogate any opponent by asking them to state how many Gem Cards he holds featuring that element. The chosen opponent must announce the number to all players.

**Example:** The Search Card used has the element “**Pairs**” and the chosen opponent holds the **Blue Diamond Pair**, **Yellow Pearl Pair**, and the **Green Pearl Pair**. The player must announce that he has three pairs.

## TWO ELEMENT CARDS

When using a **Two Element Card**, the interrogator may ask any opponent to pass over all Gem Cards they hold featuring that combination of elements. The opponent passes over the cards (if any), *facedown*, while at the same time announcing the number of cards to all players. The interrogator looks at and records the identity of the cards, and then returns them to the opponent.

**Example:** *The Search Card used is a Two Element “Blue Opals” card and the opponent has the Blue Opal Solitaire and the Blue Opal Cluster. The opponent passes these cards facedown to the interrogator, at the same time announcing that they are passing two cards. The interrogator returns both cards facedown after recording their identity on the Information Sheet.*

## FREE CHOICE CARDS

There are two kinds of **Free Choice Cards**. Either may be used as a **One** or **Two Element Card**. If used as a Two Element Card, the interrogator may not combine two of the same elements (2 gems, 2 types, 2 colors).

When using the Free Choice Card shown on the left, the interrogator may choose any combination of one or two different elements. When using the Free Choice Blues Card shown on the right, the interrogator must use the element featured on the card. If used as a Two Element Card, the interrogator chooses an element to combine with the blues element featured on the card.

**Example:** *The Search Card “Free Choice Blues” may be used to ask an opponent the number of Blue Cards they hold, or to see their Blue Diamonds, or their Blue Clusters, etc...*

## TURN END

At the end of their turn, the interrogator draws a **Search Card** from the deck to replace the one just used and play rotates clockwise. If the Drawing Deck is depleted, the Search Cards are reshuffled and placed *facedown* in the center of the table.

Instead of interrogating an opponent, a player may use their turn to exchange their Search Cards. To do so, the player discards all four of his Search Cards, and replaces them with four cards from the Drawing Deck.

## Identifying the Missing Gem

If a player believes they can identify the missing gem without further interrogation, **they may do so at any time**, not having to wait for their turn. If, however, that player believes interrogating a certain opponent will enable them to identify the missing gem, they may, **on their turn**, ask any one or two element question of that opponent regardless of the Search Cards they have before him. The player **must** then attempt to identify the gem.

To identify the missing gem, the player circles the corresponding space on their Information Sheet and announces that they have solved the mystery. Play immediately stops; no other player may announce that they have solved the mystery until after the first player has verified their solution. To verify this solution, the player secretly checks the missing gem card and:

- If correct, reveals the card by turning it face up for all players to see and is declared the winner.
- If incorrect, replaces the missing gem and the game continues. This player is now out of contention and must continue answering any interrogations while not otherwise participating in the game.

The game ends when one player correctly identifies the missing gem.

## Strategy Tips

As experience is gained, players will develop their own methods of recording evidence and other pertinent data on their Information Sheets. It is essential to record who has a particular card and who cannot possibly have a certain card (such as when a player announces he has no Blue Pearls).

Every time a player is interrogated all players gain information from the number of cards announced. A piece of information that is useless at the time it is received may become crucial in combination with later evidence.

***Example:** A player asks for an opponent's **Pearl Clusters** and has two cards passed to them. You have the **Blue Pearl Cluster** in your hand. Later, the **Yellow Pearl Cluster** is passed to you. Since there are only four Pearl Cluster Cards, you know the previously passed cards must be the **Red Pearl Cluster** and the **Green Pearl Cluster** and record this information as evidence.*

# Variations

## PLAYING FOR SECOND, THIRD, ETC.

Prior to the game, players may decide to play until there are two or more winners. In this case, the winner does not reveal the missing gem. Instead, they replace the missing gem and announce that they were correct. The game continues with the winner answering any interrogations but not otherwise participating in the game.

## ADDITIONAL MISSING GEMS

When three or four play, the game can be made more challenging by removing two (or three) Gem Cards. The play of the game is the same except that, to win, a player must correctly identify all missing gems.

## ADDITIONAL INTERROGATIONS

During their turn, each player may interrogate one or two opponents. If they interrogate two opponents, they must use a One Element Card to interrogate one opponent and a Two Element Card to interrogate the other, but may use them in any order. After the interrogation, the player draws two Search Cards from the deck.

## SUPER SLEUTH

This variation is played in the usual manner except that cards are never passed. When a Two Element Search Card is used, the opponent simply answers with the number of such cards they hold.

# About the Designer

Sid Sackson (1920–2002), the designer of *Sleuth*, was a true genius. He created a myriad of brilliant games, remarkable for their ingenuity and playability. *Sleuth* is one of over 50 published Sid Sackson titles, and many are available through Eagle-Gryphon Games.
